NICHHA INTRODUCES NICHISTAGGERED AND NICHISTRAIGHT SHINGLE SIDING

ATLANTA (January 2011) – Nichiha announces the release of the Nichistaggered and Nichistraight shingle siding to its vast product selection of fiber cement products. Nichistaggered and Nichistraight imitate the authentic look of siding shingles, but with all of the benefits of fiber cement, including damage resistance from extended exposure to forceful weather conditions.

“Expanding our highly versatile fiber cement products by unveiling the Nichistaggered and Nichistraight lines allows for our customers to have a wide array of stylish options to make their homes, restaurants, offices or businesses more sustainable,” commented Darrin Hagan, senior vice president of [Nichiha](#). “These new exterior panels still offer the same great benefits and guarantees but provide a new design reality.”

Having the same genuine look as cedar shingles, Nichistaggered and Nichistraight can be used as a primary siding or as a complement to other Nichiha products. Both shingles are universal for all climates and have been engineered to endure extremely hot and cold weather, which is ideal for any home or business. The panels come in two options – either staggered or straight – and come in a standard size of 16 inches in height, 48 inches in width and 5/16 inches thick. To ensure long term quality, the panels have a lifetime limited warranty*.
